SUMMARY

Mathematical Biology graduate at UC San Diego with research experience in computational biology, microbiology, and mathematical modeling. Interested in applying quantitative methods, statistics, and programming to solve biological and biomedical research problems.

WORKING EXPERIENCE

Student Researcher at Azusa Pacific University

June 2024 - Sep 2024

- Developing a community science program with a faculty member to breed well-adapted peppers that can thrive in Los Angeles Metropolitan Areas' weather and climate.
- Promote involvement and contribution from local high school clubs and gardening enthusiasts.
- Employed a Monte-Carlo analysis based on existing literature to model cross-pollination rates across different garden plot sizes and configurations.

Student Researcher at Pathways to STEM

Jan 2024 - Sep 2024

- Oak Crest Institute of Science in Monrovia, CA: Designed and executed an experiment with a team to discover effects of different mouthwash techniques on the recovery of oral bacteria.

Skills used: Literature review, experiment design, serial dilutions, cleaning and maintaining laboratory equipment, data

analysis, data presentation. - USC Wrigley Campus on Catalina Island, CA: Sampled ocean water using Niskin bottles and used a light spectrometer to test for phosphate levels at various depths.

Skills used: Experiment design, serial dilutions, reagent preparation, colorimetry, data analysis.

- Potash Hill Campus at Marlboro, VT: Wrote and delivered a policy brief on land conservation at the Marlboro town hall. Skills used: Literature review, data analysis, public speaking.

Mar 2023 – May 2023

Math Instructor Mathnasium Glendora - Worked with 20 students over the course of 6 hour shifts. - Responsibilities include answering any math questions at grade level K-12, grading, proctoring, and most importantly making early math concepts accessible.
