SUMMARY

Mathematical Biology graduate at UC San Diego with research experience in computational biology, microbiology, and mathematical modeling. Interested in applying quantitative methods, statistics, and programming to solve biological and biomedical research problems.

WORKING EXPERIENCE

Math Instructor at Mathnasium Walnut

Aug 2026 - Present

- Mentored approximately twenty K-12 students during four-hour instructional shifts.
- Responsibilities include answering any math questions at grade level K-12, grading, proctoring, and most importantly making early math concepts accessible.

Student Researcher at Azusa Pacific University

June 2024 - Sep 2024

- Co-developed a community science breeding program for climate-adapted pepper varieties in Southern California.
- Recruited local schools and community gardeners to participate in citizen-science activities.
- Developed Monte Carlo simulations to estimate cross-pollination rates and pollen movement under multiple garden configurations.

Math Instructor at Mathnasium Glendora

Mar 2023 - May 2023

EDUCATION

Bachelor of Science in Mathematical Biology at UC San Diego

Sep 2024 - June 2026

- Relevant coursework: Biology of Cancer, Mathematical Biology I & II, Ordinary Differential Equations, Partial Differential Equations, Data Analysis, Computational Stochastics, Probability, Numerical Methods for Physical Modeling, Evolution, Genetics.

Experiential Learning at Pathways to STEM

Jan 2024 - Sep 2024

- Oak Crest Institute of Science in Monrovia, CA: Completed human subjects research training and conducted research under an IRB-approved protocol. Designed and performed microbiology experiments as a team investigating recovery of oral microbiome following different mouthwash protocols. Performed serial dilutions, bacterial culture, laboratory quality control, and statistical data analysis. Presented experimental findings as part of a collaborative student research project.
- USC Wrigley Campus on Catalina Island, CA: Collected ocean water samples at different depths using Niskin bottles. Quantified phosphate concentrations for each sample against known standard concentrations of phosphates using spectrophotometry. Presented experimental findings to a board of scientists and principal investigators.
- Potash Hill Campus at Marlboro, VT: Developed and presented an environmental policy brief to local government officials.

Associate of Science in Mathematics at Citrus College

Sep 2022 - June 2024

- Relevant coursework: Molecular and Cellular Biology, Evolution, Ecology & Biodiversity.

SKILLS

- **Language:** Professional proficiency in Vietnamese.
- **Programming:** Linux, Python, LaTeX, Minitab, MATLAB.
- **Laboratory:** Serial dilutions, bacterial culture, laboratory quality control, statistical data analysis, spectrophotometry, working with human subjects.
